OUR PRODUCTS

Water Based Flexographic Inks

Our Water Based Inks Cover a wide range of applications.

Typical Applications: (Post – print corrugates board / Pre – print corrugates board / Cement Sacks).

Additional Range of Applications: (Coated & uncoated Paper / Envelops / Bags / Labels / Food pouches / Flexible packaging film / Industrial sacks / Paper carrier bags / Tissue paper & Napkins / Note book lining / Paper Cups – Tea tags).

Special Application & Requirements: (Heat Resistant Inks / Water Resistance Inks / Inks For Nonabsorbent Surfaces / Water Based Inks For polyolefin Surface PP, PE, Foil / Metallic Inks).

Color Concentrates

We produce high pigment quality color concentrates, covering the most color indexes for the pigments used in manufacturing water based flexographic inks, enable our clients to be free to adjust their own custom formulations.

*“Over The years we were able to develop water based ink formulations that can print on wide range of surfaces and films some **are extremely challenging.**”*

Varnishes

Post print varnish:

- Opaque varnish: Suitable for all recycle paper (low quality of surface treatment).
- Clear varnish: Suitable for virgin paper (high grade of seizing).
Designed for fine screen print applications.

Preprint varnish:

Special formula has been designed for preprint application With high heat resistance up to 180° C.

All of varnish types suitable for all kind of metering ink system (rubber roll & chambered Dr. blade).

Water based over print varnishes (O.P.V)

We produce high quality water based over print varnishes for graphic arts applications to be used as over print coating layer.

Additives

1. Dispersing Agent:

It used for:

- Inks
- Color concentrates
- Universal colors
- Paints
- Leather pigments
- Others

2. Antibacterial:

It use for

- Water base ink
- Emulsion paints
- Emulsions
- Others

Solvent Based Inks

We offer a broad range of solvent-based ink systems for all packaging applications.

Mono Star

Rotogravure inks (lamination) for mono solvent printing systems (ethyl acetate).

New Star GL

Rotogravure inks for lamination on treated polyolefin films and polyester films (Bi solvent).

New Star FL

Flexographic inks for lamination on treated polyolefin & polyester films.

New Star FHD

high definition flexographic inks (high pigmentation).

New Star FS

Flexographic inks for surface printing on treated polyolefin & polyester films.

New Star RG 15 (Anti-Static Matt Varnish)

Over Print Matt Varnish for surface printing (flexographic and Rotogravure) on treated polyolefin & polyester films.

Veno Star

Rotogravure inks for printing on shrink PVC films.

ECOS

Flexographic water base inks for surface printing on treated L.D & H.D P.E and P.P (Woven bages) stack printing.

ECOF

Flexographic and Rotogravure water based inks for lamination onto treated O.P.P and polyester P.E films.

Leather Sector Products

For leather sector we are producing:

- Color concentrates.
- Varnishes (glossy, Matt).
- Lacquers.
- Concentrated Dyes.

Dispensing System

For our customers who consume extensive amounts of ink and require wide range of colors, we offer our most up-to-date ink factory that can be installed at customer facility and can be smoothly operated by any of his employees after a very brief training.

The entire System (Hardware – Software) has produced by HEPI team. With few buttons to push, the dispensing system along with our high quality color concentrates, varnishes and additives, user can produce high quality ink at his preferred color, quantity and convenient time. With the basic 9 colors pigments up to 5000 colors can be produced. The system is fully controlled by a computer program that is extremely reliable, accurate and totally user friendly.

In a nutshell it provides you with quality ink at an extreme accuracy and substantial cost saving all at your fingertips and affordable price.

**WHY
DISPENSING
SYSTEM?**

Quality

- Freshly produced ink.
- Exact match to required colors and production environment.
- Flawless production – just in time delivery – 24 hours supply.
- Consistent ink quality.

Convenience

- No more purchase orders, follow up or documentation.
- No more stock management and handling.
- No more rework- Formulas are stored on computer with all details even the batch quality.
- System maintenance is available.
- Software can be in Arabic or English interface.
- Better employee safety and environmental working conditions.
- One batch can be as low as 200:20.

Cost effectiveness

- Save supplier production cost .
- From an economical 9 basic color ingredients you can produce up to 5000 ink colors.
- Production of the exact needed ink quantity no waste.
- Using waste ink by re-use of the returned inks.
- Low cost of system maintenance, non-expensive spare parts.
